Describe the human health and environmental need:

Provide a description of the human health and environmental issue to be resolved.

Type of Project (circle one):

- A. Water Supply (**may** include potable water treatment, water supply systems and distribution, water pollution prevention, projects to improve or restore quality of water resources)
- B. Wastewater Treatment (**may** include wastewater collection systems, wastewater treatment plants, water reuse systems, systems for treatment and beneficial use of sludge)
- C. Solid Waste Management (**may** include landfills, solid waste collection and disposal systems, reduction, reuse, or recycling of waste, waste-to-energy projects)
- D. Air Quality Improvement
- E. Industrial and Hazardous Waste
- F. Public Transportation
- G. Clean and Efficient Energy
- H. Municipal Planning and Development
- I. Water Management
- J. Other: _____

(specific project areas which may be funded under sectors D thru I have not been specifically defined by the BECC and NADB; eligibility for funding under these new sectors will be determined on a case-by-case basis)

Describe the proposed project or project concept:

Provide a description of the project concept or project including the proposed technology and scope of the project (e.g., closure, rehabilitation, expansion, new facility, etc). The project/project concept should correspond directly to the human health and environmental need stated above.

Describe any studies needed to develop the project or project concept:

Discuss any specific tasks or studies needed to develop the project or project concept such as preliminary planning and engineering studies, geological and hydrological studies, environmental assessments, technical and financial feasibility studies, facility plans, etc. If specific studies have already been completed, please provide the title, author and date of these studies.

Project Location:

Describe the geographic location of the project and the area of project impact.

Agency Jurisdiction:

List the agency, which should have the lead jurisdiction over the project.

Estimate Cost:

Provide the best estimate for the cost of construction of the environmental infrastructure project and any studies/assessments needed to adequately develop the project.
